REASONS FOR ALLOWANCE

1. Claims 1-3, 9-13, 18-27, and 30-35 are allowable.
2. The following is a statement of reasons for the indication of allowable subject matter.

The prior art, U.S. Patent No. 5,784,058 to LaStrange, teaches the display of multiple documents obtained from a network. More specifically, the user can selectively create a second browser display page by following a link contained in the first browser display page, without overwriting the contents of the first browser display page. Furthermore, the reference to LaStrange discloses a sticky page feature, which maintains the current display page next to the first display page.

However, the display provides two distinct navigational controls. The browser display methods taught by LaStrange fails to teach or suggest a single navigational focus, which calls for a single set of navigational controls in a user interface configured to control *all contexts* within a frame of the display when the contexts are the subject of the single navigational focus. The reference, U.S. Patent No. 5,623,679 to Rivette teaches the simultaneous display of an equivalent window and an image window. More specifically, the equivalent window and image window operate through the control of separate scroll bars and the Patent Image Toolbox is confined to operate upon images in image window and not both windows at the same time. Therefore, the reference fails to explicitly teach or suggestion a single navigational focus being defined as including a single set of navigational controls in the user interface configured to configured to control all contexts within a frame of the display when the contexts are the subject of the single navigational focus.
